

# Umbrella Theatre Company

## *Technical Rider*

---

### **Technical Specifications**

Umbrella Theatre has a 2 metre diameter. An additional 3 metre diameter clearance for securing the structure & crowd management is required (5 metres diameter in total).

For safety reasons, Umbrella Theatre must be packed down in rain or medium-high wind levels. It is recommended that the hirer designate an alternative location in the event of poor weather. It is also essential that the theatre be located on flat ground, preferably an earth surface can be penetrated with tent pegs. In addition a location in full sunlight is not recommended during summer time as this can result in an uncomfortable internal temperature.

The Umbrella is not sound proofed and noise will bleed both into and out of the theatre during performances. It is recommended that this be considered when designating a suitable location and time slot for the installation.

It is requested that the hirer provide access to a GPO power source, preferably with an extension cord and power board.

### **Umbrella Theatre Will Provide**

- The Umbrella Theatre structure
- A PA and sound equipment
- Internal lighting (external lighting for night time performances not included)
- Props/costumes/consumables
- 1 x Crowd Management Staff/Crew
